CANONICAL SOURCE · ARYZE SALES & MARKETING

Qualification Framework

> Five questions that decide whether an Aryze lead is worth pursuing — and which of the three products fits. Use before every first discovery call. If you can't answer at least four of five with confidence, the lead is not a top-priority ICP fit.

The five questions

1. **Does the customer have a clear problem Aryze can solve?**
   A "we're exploring" answer is not a problem. A "card costs are eating margin and we have a quarterly EBITDA target" is a problem.
2. **Is the problem severe enough to create urgency, not just interest?**
   Polite interest does not convert. A regulatory deadline, a peer move, a CFO directive, a renewal expiry — these create urgency.
3. **Is there an internal owner or buying committee?**
   If no one can name "who owns this initiative internally?", the deal will stall in evaluation.
4. **Can the customer actually implement and use the product?**
   Pay by Bank needs dev capacity to integrate a new rail. Stablecoin Factory needs a technical team to use the sandbox. Digital Cash needs a multi-year programme team. No implementation capacity, no deal.
5. **Is it the right Aryze product for the actual need?**
   A merchant asking for "stablecoin payments" probably needs Pay by Bank, not Stablecoin Factory. A licensed bank asking for "a quick token deploy" probably needs Digital Cash. Re-route before pitching.

Scoring

YESES	VERDICT
5/5	Top-priority ICP fit. Lead with full discovery, build account plan.
4/5	Strong fit. Identify which one is uncertain and resolve in the first call.
3/5	Worth a discovery call but not a sprint. Treat as exploratory.
≤2/5	Not a fit right now. Park politely with a re-engage trigger.

Product routing — quick gate

Before committing to any pitch, confirm the product:

- **Better payment acceptance, recurring deposits, lower card cost, chargeback pressure → Pay by Bank** (`Documents/Analyser/Pay-by-Bank/`)
- **Concrete stablecoin or tokenised asset use case, builder-led, weeks-to-quarter horizon → Stablecoin Factory** (`Documents/Analyser/Stablecoin-Factory/`)
- **Already-licensed institution, operating digital cash under own licence, 6–18 month cycle → Digital Cash** (`Documents/Analyser/Digital-Cash/`)

If the buyer's actual need fits a product different from the one they asked about, re-route. Mixing products mid-deal is the most common way Aryze loses an opportunity — see the audit report (`Documents/Reports/Audit-Modsigelser-2026-05-13.md`) for the cost pattern.

Anti-ICP signals (walk away)

These signals mean none of the three products fits, regardless of customer enthusiasm:

- Wants Aryze as **issuer** or **regulated operator** — Aryze is infrastructure, not operator
- Needs **AIS features** (Account Information Services) — we are PIS-only on Pay by Bank
- Needs **outgoing payments as the primary flow** (player withdrawals, refunds as standalone) — we cover customer-to-merchant only
- Needs **licence delivery** — Aryze doesn't provide the licence
- Pure **research mode** with no execution path or budget
- Operates **outside our geographic coverage** (Pay by Bank: UK + EU/EEA)

Source of truth

This framework is derived from `Documents/Analyser/README.md` (cross-product routing index). If those documents change, update this one.
