Aryze Nightlife: Commercial Exploration

A market, economic and commercial case for Pay by Bank in nightlife, bars, clubs, festivals and events

Date: 30 May 2026
Markets: Nordics, EU and UK. Active execution starting in Denmark and the UK.

1. Executive summary

Nightlife, bars, clubs, festivals and events is a large, high-volume market with no direct account-to-account competitor and a cost problem Pay by Bank is built to solve. The case rests on three points.

The volume is real and the rail is proven. The segment generates payments at enormous scale. The European pubs, bars and coffee shops sector alone is EUR 100.6 billion a year, national venue populations run into the tens of thousands, and on a conservative reading the UK nightlife and events market by itself represents on the order of 80 to 100 million payment transactions a year. Because Pay by Bank earns a fixed fee on every transaction, transaction count is the revenue driver, and it is large. The rail underneath is already operating at national scale: UK open banking processed 31 million payments in March 2025 alone, up 70 percent year on year (Open Banking Limited). Nightlife adds volume on a rail that is already proven and growing fast.

The pain is expensive and getting worse. Nightlife sits in a high-risk card category where a single disputed transaction costs a European merchant about 3.9 times its face value once fees, lost goods, reserves and admin are counted (LexisNexis). First-party fraud, a guest disputing a real night out, rose from 15 percent of reported fraud in 2023 to 36 percent in 2024, and the penalties are getting tougher: Visa's monitoring threshold drops to 1.5 percent with a USD 8 fee per dispute from April 2026. Account-to-account payments remove the card-scheme chargeback entirely and run at a fraud rate of 0.013 percent against 0.045 percent for the wider industry. Aryze does not just lower the fee; it removes the most expensive and fastest-growing cost in the category.

No one else is here yet. No account-to-account provider has built a dedicated position in nightlife, and Aryze runs Pay by Bank on Mastercard Open Banking — live in the UK today and extending across 19 European markets and roughly 3,000 banks (EU/EEA: extension signed and compliance-cleared, technical go-live pending) — which makes it more reliable and credible than the early-stage providers in the space. The plan is to enter through a focused, low-cost pilot in Denmark and the UK over the summer, win on chargeback elimination and reliability, and build the reference case that opens the larger venue groups and the festival platforms. This is a parallel expansion alongside iGaming.

2. Strategic context

Nightlife is an opportunity to enter an adjacent high-risk vertical early, prove the model on live transactions, and build a defended position before anyone else does. It carries the same underlying pain Aryze already knows from iGaming, a high-risk card category, chargeback exposure and rising fees, but with no established account-to-account rival. A real problem with no direct competitor is what makes it a strong place to land a proof of concept and expand from.

3. Scope and method

This report covers mainstream nightlife: licensed nightclubs, late-night bars, cocktail venues, music venues, festivals, event venues and adjacent venue-based payment flows. Adult, pornographic and strip-club businesses are excluded from all sizing, classification and ranking.

Market figures are drawn from primary and industry sources, listed in full at the end. Transaction-volume and per-venue figures are calculated from published sector data and the planning assumptions set out in the economics section, and are labelled as estimates where they are not directly observed.

4. The market

4.1 Size and structure

MARKET	SECTOR SIZE	VENUE COUNT	PRIMARY SOURCE	CONFIDENCE
UK nightclubs (2025)	approximately GBP 1.2 billion	823 (down 36 percent since March 2020)	NTIA 2025	Verified
UK late-night venues, all types (2025)	(broader)	2,424 (down 26.4 percent since March 2020)	NTIA 2025	Verified
UK pubs and bars (2024)	approximately GBP 23.6 billion	approximately 45,000	Hospa	Indicative
EU pubs, bars and coffee shops (2025)	EUR 100.6 billion	(aggregate)	IBISWorld Europe	Verified
Germany bars and nightclubs (2025)	EUR 1.28 billion (clubs and bars subset, 2022)	33,911 enterprises	IBISWorld Germany, Statista	Verified (count)
France discotheques	approximately EUR 1 billion	approximately 1,500 (sector in decline, 430	SNDLL	Single-source

MARKET	SECTOR SIZE	VENUE COUNT	PRIMARY SOURCE	CONFIDENCE
		closed since March 2025)		
Spain pubs, bars and nightclubs (2024)	over EUR 20 billion	nightlife a subset of approximately 164,000 beverage-serving venues	Statista, IBISWorld	Revenue verified
Italy dance venues (2024)	approximately EUR 2 billion (EUR 500 million direct)	approximately 2,500 venues, 34 million attendances	SILB-FIPE	Verified
Denmark cafes, bars and discotheques (NACE 563000, 2024)	DKK 6.9 billion (approximately EUR 925 million)	nightlife a subset	eStatistik (official)	Verified
Denmark DRC NAT member venues	not separately published	approximately 350	DRC NAT	Estimate

The European pubs, bars and coffee shops sector grew at a 5.8 percent compound annual rate over the five years to 2025. The UK venue population has consolidated since March 2020, and a smaller, consolidated population works in Aryze's favour: the venues that remain are larger and more commercially managed, which makes payment economics a board-level conversation rather than an afterthought. On the continent the market is more fragmented and independently run, and in the UK and the Nordics it is more consolidated, with chains holding a larger share.

4.2 The cost of the card category

Nightlife venues operate under MCC 5813, classified by acquirers across Europe as medium to high risk. The reasons cited across acquirer guides are consistent: late-night alcohol transactions, tab-based billing where the authorised and final amounts differ, high variance across the week and the season, first-party fraud, and event cancellation disputes. The result is a set of costs that are high and rising.

COST ITEM	DOCUMENTED LEVEL
Card acquiring fee, high-risk tier	3.5 to 7 percent all in
Rolling reserve	5 to 15 percent of gross volume held 90 to 180 days
Chargeback fee per dispute	USD 20 to 50

The headline rate understates the real cost. Once fees, the lost goods or service, the reserve and the admin are counted, a single disputed transaction costs a European merchant about 3.9 times its face value (LexisNexis, EMEA True Cost of Fraud). On industry benchmarks, travel and hospitality carry a chargeback rate of around 1.65 percent, well above the roughly 0.9 percent the card schemes treat as the safe ceiling, and nightlife sits in this high-risk band (indicative, payment-industry sources). The disputes themselves are increasingly the customer's own doing: first-party fraud rose from 15 percent of reported fraud in 2023 to 36 percent in 2024, and roughly 45 percent of all chargeback volume is now fraudulent (Mastercard, Datos Insights). The penalties are getting tougher on top of that. Visa's Acquirer Monitoring Program merchant Excessive threshold drops to 1.5 percent on 1 April 2026, with a USD 8 fee per dispute and no warning tier, and persistent chargebacks risk the MATCH list, a five-year industry blacklist that can stop a venue getting card processing at all.

What a card cha

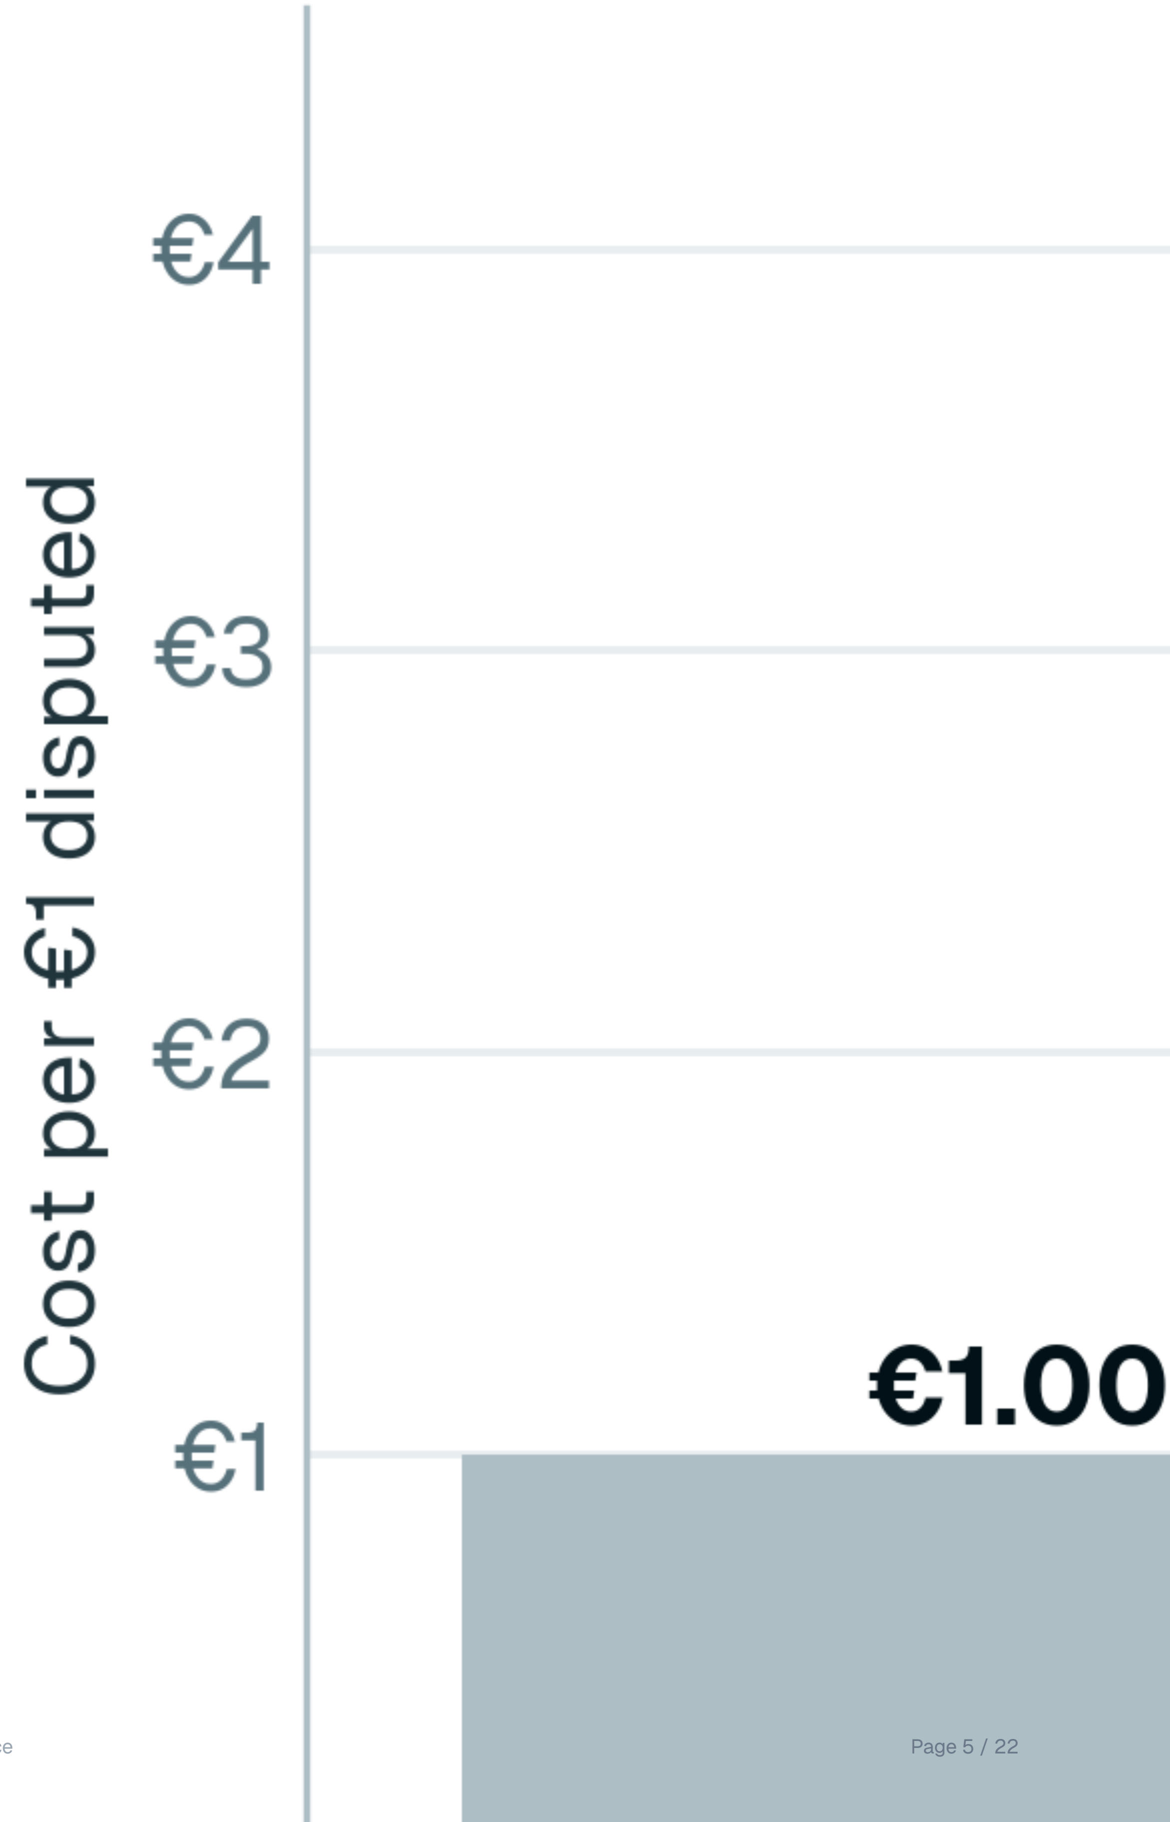

Figure 1. In Europe a disputed card transaction costs a merchant about 3.9 times its face value once fees, lost goods, reserves and admin are counted (LexisNexis).

Denmark requires acquirers to publish maximum rates, which gives an unusually clear view of card economics. Foreign cards, which matter in tourist-heavy venues in Copenhagen and across Europe, are uncapped in the EEA and cost materially more than domestic cards.

ACQUIRER	DANISH DEBIT	DANISH CREDIT	FOREIGN CARD (CEILING)
Bambora (Worldline)	0.85 percent	1.00 percent	2.80 percent
Handelsbanken	1.50 percent	1.50 percent	3.55 percent
Swedbank	2.25 to 2.75 percent	1.95 to 2.75 percent	2.75 percent
Nets	2.29 to 3.78 percent	2.78 to 4.27 percent	up to 6.26 percent plus DKK 0.19
Clearhaus	1.45 percent local	(combined)	2.75 percent

These are published list and maximum rates. The key point, that foreign cards cost several times domestic cards and that Nets publishes a foreign-card ceiling far above domestic rates, is firm; the exact per-acquirer cells are a single published-rate source and are confirmed against a live quote in a sales conversation.

4.3 What account-to-account removes

Account-to-account payments are push-initiated under strong customer authentication and do not run through the card schemes, so the card-scheme chargeback mechanism and the rolling reserve that comes with it are removed by design. The fraud numbers back this up: Open Banking Limited reported account-to-account fraud at 0.013 percent by volume against 0.045 percent for the wider industry in H1 2025, and the open-banking figure fell year on year while industry-wide fraud rose.

Account-to-acc

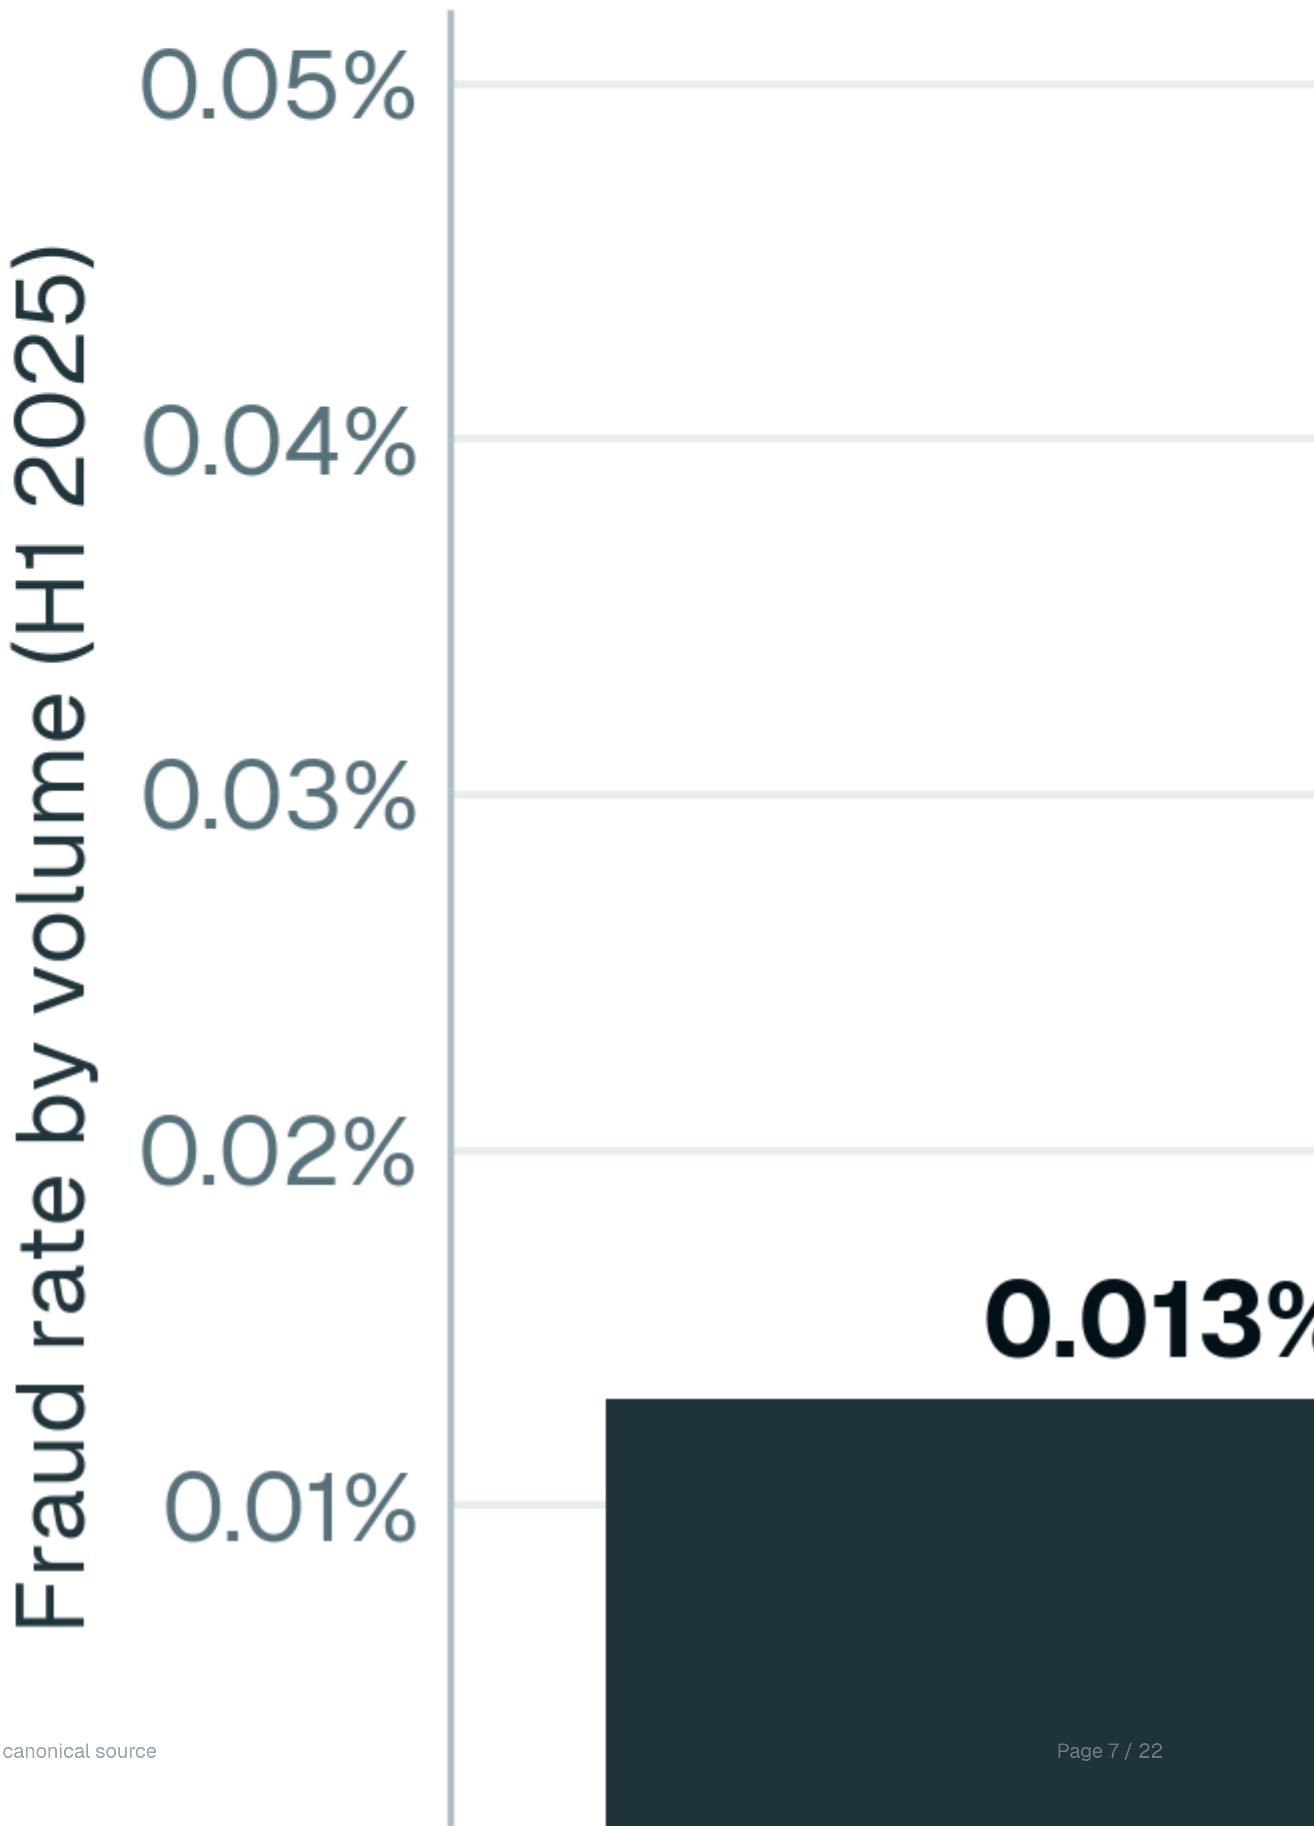

Figure 2. Account-to-account fraud runs roughly 3.5 times below the wider payment industry (H1 2025, Open Banking Limited).

The exposure this removes is concentrated and real. Two recent UK event-sector failures show how fast card-dispute losses can add up: Festicket entered administration owing GBP 22.5 million and Pollen collapsed owing GBP 78.6 million, both in 2022. Consumer protection still applies through the regulatory channel, but the scheme chargeback, the reserve and the MATCH-list risk go away.

4.4 Spend per visit

MARKET	MAINSTREAM PER VISIT	PREMIUM PER VISIT	VIP AND BOTTLE SERVICE
United Kingdom	GBP 30 to 50	GBP 80 to 150	GBP 300 to 700
Germany, Berlin	EUR 50 to 80	EUR 80 to 150	EUR 300 to 2,000 plus
France, Paris	EUR 50 to 70	EUR 120 to 200	EUR 250 to 1,000 plus
Spain, Madrid (verified 2025)	EUR 79.10	EUR 100 to 150	EUR 300 to 800
Spain, Ibiza	EUR 150 to 225	EUR 185 to 250	EUR 350 to 1,000 plus
Italy, national mainstream	EUR 14.40 per attendance	(national average)	n/a
Denmark, Copenhagen	DKK 250 to 400 (EUR 33 to 54)	DKK 500 to 800 (EUR 67 to 107)	DKK 3,000 to 10,000 plus
Sweden, Stockholm	SEK 500 to 800 (EUR 44 to 70)	SEK 800 to 1,200 (EUR 70 to 105)	SEK 10,000 plus
Norway, Oslo	NOK 500 to 800 (EUR 43 to 69)	NOK 900 to 1,500 (EUR 77 to 129)	NOK 1,500 to 3,000 plus
Netherlands, Amsterdam	EUR 30 to 50	EUR 60 to 100	EUR 200 to 500

Spend per visit ranges widely across markets and segments, from a mainstream night out to premium and VIP spend in the hundreds and thousands. The verified primary points are Madrid at EUR 79.10 per night out and Italy at EUR 14.40 per attendance. Festivals are especially well documented: the Weezevent 2024 barometer, across 800 events and over 20 million participants, puts average daily spend per attendee at EUR 81, composed of EUR 48 on tickets, EUR 18.41 on food, EUR 9.75 on bar and EUR 4.47 on other.

4.5 Existing solution landscape

Account-to-account solutions are established in adjacent service industries (restaurants, hotels, ticketing) but not in nightlife specifically.

SERVICE VERTICAL	ACCOUNT-TO-ACCOUNT PROVIDERS (SELECTED)
Restaurants and sit-down hospitality	Atoa, Yoello (Epos Now), Sunday, qlub, Mr Yum
Hotels and broader hospitality	Noda
Festival cashless wristband platforms	Tappit, Weezevent, Intellitix, Glownet, PlayPass, Festipay
White-label account-to-account infrastructure	Finexer, Volt, Banked, Token.io

No provider has built a dedicated commercial position for nightlife, late-night bars, clubs and event venues with named customer cases. The festival cashless platforms run their underlying top-up flow on card rails. The competitors in the space are early-stage and UK-weighted (Atoa is at pre-seed scale and UK-only, Noda spans roughly 2,000 banks across 28 countries, Yoello was absorbed into Epos Now, Finexer is UK white-label infrastructure), and several rent their rails. This is the clearest unclaimed position in the vertical, and it is where Aryze's Mastercard-grade rails are an advantage.

5. The transaction opportunity

Pay by Bank earns a fixed fee on every transaction, so the size of the prize is measured in transaction count, and the count is large. Nightlife and events are among the highest-volume consumer categories there are: high-frequency, low-friction, repeated through the night and across a season.

A conservative bottom-up read of the UK alone illustrates the scale. The 2,424 late-night venues still operating (NTIA) generate, at a conservative 15,000 to 35,000 payments each per year, on the order of 35 to 85 million transactions a year. UK live music and festivals drew 23.5 million attendees in 2024 (UK Music), and with cashless top-ups and on-site spend that adds tens of millions of transactions more. Taken together the UK nightlife and events market represents roughly 80 to 100 million addressable payment transactions a year (estimate). Extended across the 19 markets Aryze reaches, the addressable count runs into the hundreds of millions a year.

Estimated
Late-night venues
Festivals & events
Total, UK (estimate)
0

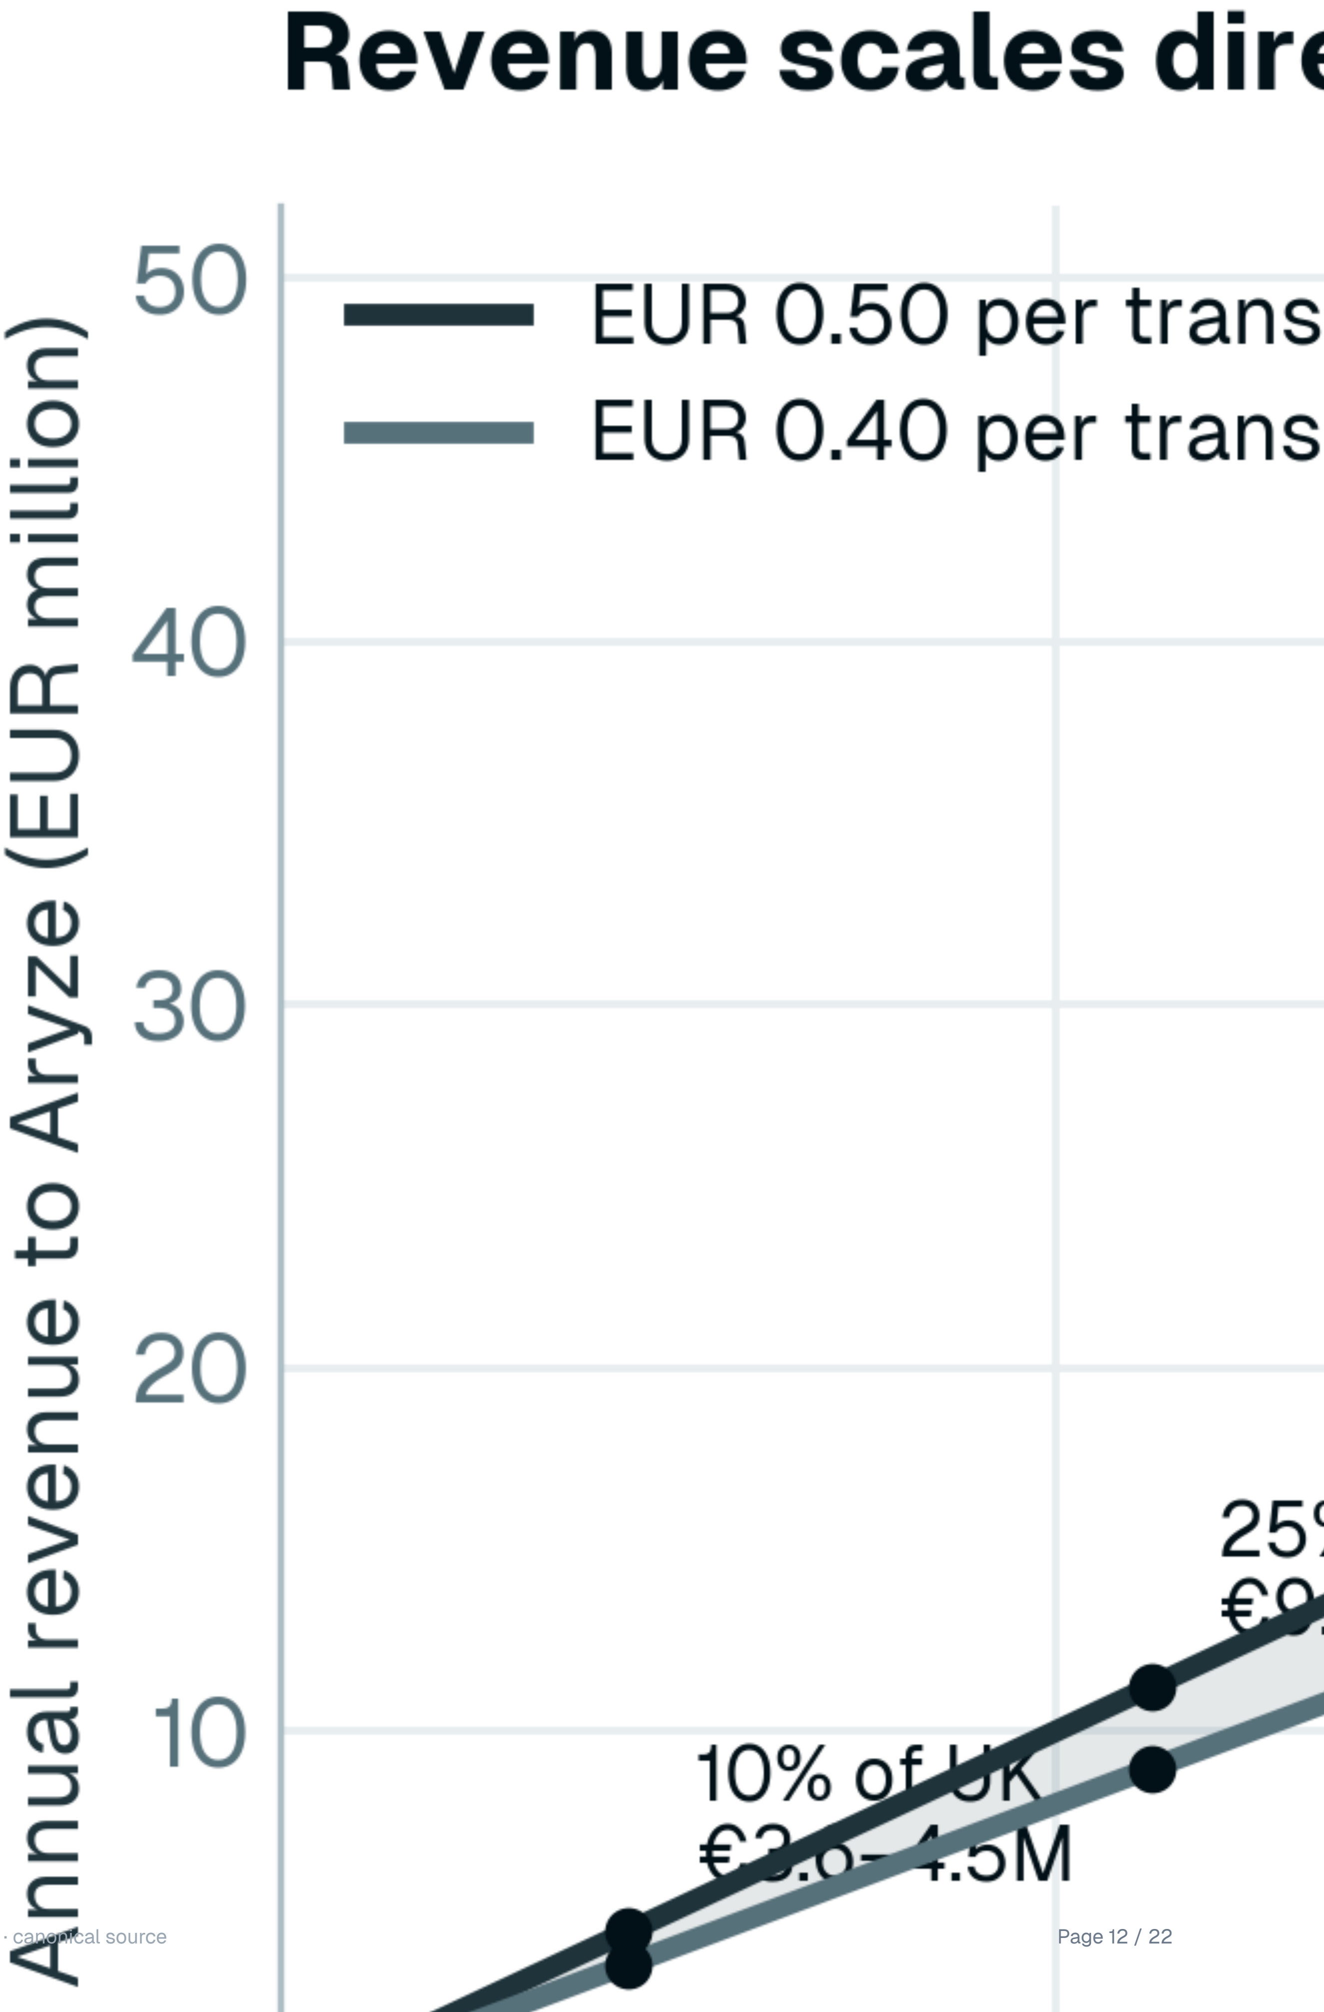
Figure 3. Indicative addressable annual transactions, UK nightlife and events (estimate, from published venue counts and attendance data).

The rail this runs on is already proven at national scale. UK open banking processed 31 million payments in March 2025 alone, one in every thirteen Faster Payments, up 70 percent year on year, with 13.3 million active users, up 40 percent (Open Banking Limited). Account-to-account is not an experiment Aryze is asking a venue to take on; it is a payment method already moving hundreds of millions of payments a year and growing faster than any card product. Nightlife adds volume on top of that momentum.

What the volume is worth

Every transaction on the rail earns Aryze the same fixed fee, EUR 0.40 in the Nordics and EUR 0.50 in the wider EU, whatever the ticket size. Revenue is a straight function of volume: the more transactions clear on the rail, the more Aryze earns.

TRANSACTIONS ON THE RAIL PER YEAR	REVENUE AT EUR 0.40	REVENUE AT EUR 0.50
1 million	EUR 0.4 million	EUR 0.5 million
5 million	EUR 2.0 million	EUR 2.5 million
10 million	EUR 4.0 million	EUR 5.0 million
25 million	EUR 10.0 million	EUR 12.5 million
50 million	EUR 20.0 million	EUR 25.0 million



Revenue scales dire
EUR 0.50 per trans
EUR 0.40 per trans

40
30
20
10
10% of UK

Figure 4. Aryze's revenue scales linearly with transactions on the rail, at the fixed fee per transaction.

Against the roughly 80 to 100 million addressable transactions a year in the UK alone, capturing even a single-digit percentage puts revenue in the low millions, and the line steepens as more markets and platforms come on. A mainstream tier of DKK 2 to 2.5 (approximately EUR 0.27 to 0.33) is available where a sharper price helps win volume.

6. Where the volume comes from

Because revenue comes from volume, the opportunity is broad: it sits across the whole customer base, not a narrow top tier. A busy, high-frequency venue clears more transactions than a quiet premium room, so it is worth more to the rail. The largest volume pools are:

- **Festival and event cashless top-ups.** Millions of attendees, several top-ups each, and one platform relationship reaching many events. The single largest opportunity, and a 2027 outcome because the 2026 season is contracted.
- **Mainstream nightclubs and bars.** The bulk of nightlife transactions, reached at scale through a tab or top-up flow and point-of-sale or chain distribution, where one relationship puts the rail in front of many venues at once.
- **Mid-tier event ticketing**, where the major platforms have not locked the buyer flow, competitive against ticketing fees of roughly 7 to 13.5 percent.
- **Business-to-business supplier payments** in hospitality: high value, low chargeback exposure.
- **Premium and VIP venue spend** adds high-value transactions on top, but it is one flow among many, not the target in itself.

The point is reach and frequency, not ticket size: every payment clears the same fee, so the prize is the venues and events that generate the most transactions. How a venue puts the rail in front of its guests, by QR at the bar, a tab, or a top-up, is its own choice; Aryze provides the rail in every case.

7. Geographic priority

Markets are ranked in two steps. First a threshold: the transaction value at which the fixed fee is competitive. Then a weighted score across three market characteristics, with average transaction value weighted highest because it most affects the per-transaction economics.

CRITERION	WEIGHT
Average transaction value	40 percent
Market size	30 percent
Account-to-account competitive density (lower is better)	30 percent

MARKET	ATV	SIZE	DENSITY	WEIGHTED SCORE
Spain (Ibiza segment)	5	3	5	4.40
Sweden (Stockholm)	5	3	5	4.40
France (Paris premium)	4	4	4	4.00
Germany (Berlin and major cities)	3	5	4	3.90
United Kingdom (London premium)	4	4	3	3.70
Norway (Oslo premium)	4	2	5	3.70
Denmark (Copenhagen premium)	4	2	4	3.40
Italy (Sardegna premium only)	3	2	5	3.30

Geographic prio

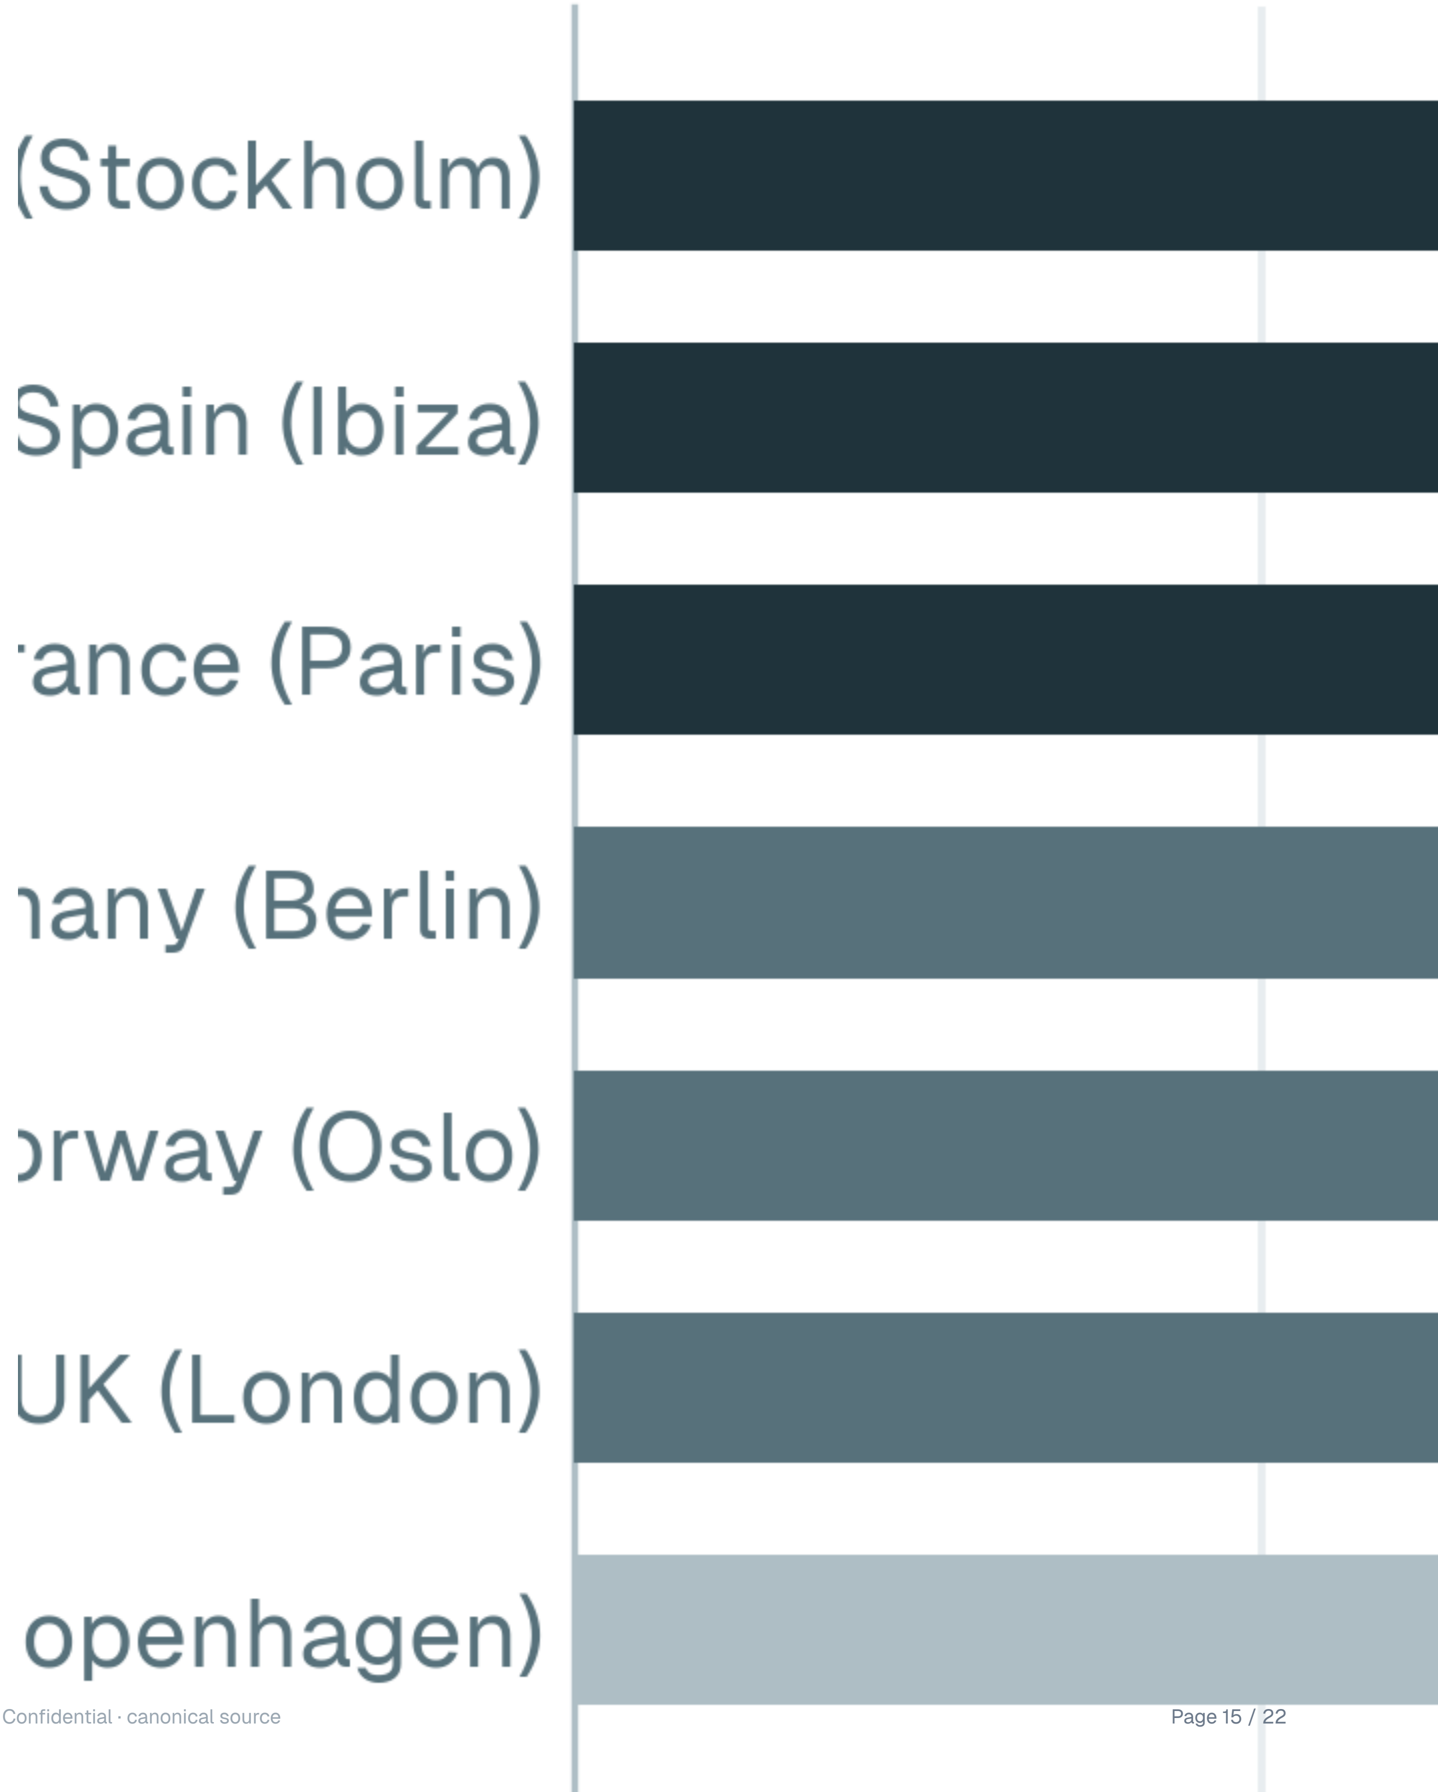

Figure 5. Markets ranked by weighted score, with average transaction value carrying the most weight.

The high-value markets rank at the top. Germany has the largest market, and Denmark and the UK rank on market characteristics and carry the practical advantage of being where execution begins.

8. The economics

8.1 Pricing

Pricing is a fixed fee per transaction: DKK 3 (approximately EUR 0.40) in the Nordics and EUR 0.50 in the wider EU, with a mainstream tier of DKK 2 to 2.5 available. Because the fee is fixed, the saving against a percentage-based card rate grows with every krone the guest spends.

TRANSACTION VALUE	EFFECTIVE RATE AT DKK 3	EFFECTIVE RATE AT DKK 2.5
DKK 60 (single drink)	5.0 percent	4.2 percent
DKK 150 (a round, the Danish average purchase)	2.0 percent	1.7 percent
DKK 500 (a tab)	0.6 percent	0.5 percent
DKK 2,000 (bottle service)	0.15 percent	0.13 percent

The Danish average purchase is around DKK 150, a round, where the fixed fee already beats cards. The competitive benchmark:

ALTERNATIVE	PUBLISHED PRICING
Card acquiring, high-risk tier	3.5 to 7 percent all in, plus rolling reserve
Atoa (UK)	0.6 percent per transaction
Noda (multi-EU)	from 0.1 percent per transaction
Finexer (UK)	GBP 0.20 to 0.30 flat

Against card acquiring the fixed fee wins comfortably at realistic ticket sizes, and against the percentage-priced account-to-account specialists it wins as the ticket rises. Because the fee is the same on every transaction, Aryze's revenue is driven by how many transactions clear, not by their size.

8.2 Revenue model

Per-venue revenue equals estimated annual transactions multiplied by the fee multiplied by the share of flow captured. Using the UK as a worked example, a nightclub turning over approximately GBP 1.45 million a year at a GBP 40 ticket implies roughly 36,000 visits.

MODEL	TRANSACTIONS PER VENUE PER YEAR	GROSS REVENUE PER VENUE AT EUR 0.50
Per tab (1 per visit)	36,000	EUR 18,000
Per round (3 per visit)	108,000	EUR 54,000

Aryze captures a share of flow, not all of it:

STAGE	CAPTURE	PER VENUE PER YEAR, PER ROUND
Early	10 percent	EUR 5,400
Mid	30 percent	EUR 16,200
Mature	50 percent	EUR 27,000

Per-venue revenue is steady, and the opportunity scales two ways: across many venues, and through the platform relationships that aggregate volume. Festival cashless platforms aggregate volume across many events and run on card rails today; a single platform relationship is worth more than any national venue rollout.

PLATFORM SCENARIO	ESTIMATED ANNUAL REVENUE TO ARYZE AT 30 PERCENT CAPTURE
One platform across 20 mid-sized festivals	EUR 2 to 8 million
One platform across 50 plus festivals at scale	EUR 5 to 20 million

8.3 Unit economics

ITEM	FIGURE
Fully loaded CAC per venue (industry benchmark)	EUR 1,200 to 1,800
Annual revenue per venue, mid-stage	EUR 16,200
Payback, mid-stage	under 2 months
Payback, early-stage (10 percent capture)	6 to 12 months

Per-venue payback is well inside the 18 to 24 month fintech benchmark even on conservative assumptions.

8.4 Three-year scenarios

SCENARIO	ASSUMPTIONS	YEAR 1	YEAR 2	YEAR 3
Conservative	Venues only, low capture, no platform	EUR 25 to 50k	EUR 150 to 300k	EUR 0.5 to 1M
Base	Venues plus one platform relationship from Year 2	approximately EUR 50k	EUR 1 to 3M	EUR 3 to 8M
Aggressive	Faster conversion, two platforms, a chain agreement	EUR 200 to 500k	EUR 5 to 12M	EUR 10 to 25M

Figure 6. Three-year revenue scenarios; the platform relationship drives the upside.

The spread is wide because the platform relationship is the biggest factor. These are planning ranges; the pilot produces the measured numbers behind them.

8.5 Sensitivity

The outcome moves most on whether a platform deal is signed, then on the capture rate, then on the realised transaction size, then on the pricing tier. The pilot measures the capture rate, the realised ticket and the chargeback and acquirer cost displaced at a real venue.

9. Go-to-market

9.1 Positioning

The pitch leads on chargeback elimination and Mastercard-grade reliability, with price as a supporting point that already beats cards at realistic ticket sizes. In adjacent high-risk verticals, buyers have not chosen on headline price alone, which supports a positioning built on risk elimination and reliability. Aryze is a chargeback-free, reliable payment option alongside a venue's existing card setup. The payment experience for the mainstream guest is no harder than the phone-based payments people already use daily.

9.2 The motion

The primary motion is direct, owner-led outreach to bar and club owners, accelerated by industry relationships. The near-term goal is live transactions, real data and a small number of reference venues, which is what unlocks the larger players.

Lead generation runs broadly across Denmark, the UK and the EU, while active execution begins in Denmark and rolls outward to the UK and selected EU markets as the model proves repeatable. In the home market, an early conversation with a venue group that owns both a large estate and a card-based loyalty and top-up wallet could deliver a rail swap and distribution at once.

9.3 Targets

The first pilots target premium, owner-led venues where decisions are fast and the reference case can be built quickly, followed by venue groups and chains for scale. Premium late-night venues in the United Kingdom enter the pipeline now, with pilots and chains as the model proves out, and the wider EU follows as execution rolls outward. Larger platform and consolidator conversations open once live transactions exist.

9.4 Pricing posture

Lead on chargebacks and reliability. Price is a supporting point that already wins against cards at realistic ticket sizes. Use the mainstream tier where a sharper price point is useful against another account-to-account provider.

9.5 The summer plan

The entry is a focused, low-cost pilot in Denmark and the United Kingdom over the summer. The summer peak provides the strongest transaction data and the clearest foreign-card pain, and the pilot produces the reference case that opens the larger players and chains. Festivals are a 2027 motion, because the 2026 season is already contracted.

10. Risks

- The transaction-volume and revenue figures are calculated from published data, and the pilot replaces them with measured numbers.
- The largest upside rests on a festival platform relationship, which is a 2027 outcome.
- Pricing is being finalised.
- Per-venue revenue scales with the number of venues and platforms, so the case is built on reaching scale rather than on any single venue.
- Being first means there is no competitor playbook to copy, which is also the advantage: the reference case is Aryze's to set.

11. The plan

Enter through a focused, low-cost pilot in Denmark and the UK over the summer. The evidence supports the market, the cost the rail removes is real and rising, and the transaction volume is large. The pilot produces a reference case with real numbers on transactions, chargebacks avoided and card cost displaced, and that case opens the larger venue groups, chains and festival platforms.

What the plan needs:

1. Approval of the summer pilot and its resourcing.
2. Confirmation of the pricing the pilot quotes.
3. Agreement that scaling beyond the pilot is driven by the reference case it produces.

12. Sources

Primary published sources behind this report:

- NTIA UK 2025 reports (UK late-night venue counts, the 2025 contraction)
- UK Music, This Is Music 2025 (23.5 million UK music tourists, 2024)
- IBISWorld UK, Germany and Europe industry reports (EU sector at EUR 100.6 billion, Germany 33,911 enterprises)
