FRAMEWORK · METHODOLOGY

Qualification framework

Five questions that decide whether a lead is worth pursuing — and which of the three products fits. Applied before every first discovery call: four of five answered with confidence marks a priority fit; fewer does not.

Owner: Commercial · Confidential

IN SHORT

Five questions decide whether a lead is worth pursuing — and which of the three products fits. Applied before every first discovery call: four of five answered with confidence marks a priority fit; fewer does not.

WHEN APPLIED

Before first discovery

Run on every lead ahead of the first call.

PRIORITY BAR

4 of 5 yeses

Four answered with confidence marks a priority fit.

SETTLED FIRST

Product, then pitch

The right Aryze product is decided before any pitch.

The five questions

Q1 · PROBLEM

Does the customer have a clear problem Aryze can solve?

A "we're exploring" answer is not a problem. A "card costs are eating margin and we have a quarterly EBITDA target" is a problem.

Q2 · URGENCY

Is the problem severe enough to create urgency, not just interest?

Polite interest does not convert. A regulatory deadline, a peer move, a CFO directive, a renewal expiry — these create urgency.

Q3 · OWNER

Is there an internal owner or buying committee?

If no one can name "who owns this initiative internally?", the deal will stall in evaluation.

Q4 · CAPACITY

Can the customer actually implement and use the product?

Pay by Bank needs dev capacity to integrate a new rail. Stablecoin Factory needs a technical team to use the sandbox. Digital Cash needs a multi-year programme team. No implementation capacity, no deal.

Q5 · FIT

Is it the right Aryze product for the actual need?

A merchant asking for "stablecoin payments" probably needs Pay by Bank, not Stablecoin Factory. A licensed bank asking for "a quick token deploy" probably needs Digital Cash. The fit comes before the pitch.

Scoring

YESES	VERDICT
5/5	Top-priority ICP fit. Warrants full discovery and an account plan.
4/5	Strong fit. The uncertain question is the one to resolve in the first call.
3/5	Worth a discovery call but not a sprint. Exploratory.
≤2/5	Not a fit right now. Parked, with a re-engage trigger.

Product routing — quick gate

The product is settled before any pitch:

PAY BY BANK

Better payment acceptance

Recurring deposits, lower card cost, chargeback pressure → Pay by Bank.

Customer profile →

STABLECOIN FACTORY

Concrete stablecoin or tokenised asset use case

Builder-led, weeks-to-quarter horizon → Stablecoin Factory.

Customer profile →

DIGITAL CASH

Already-licensed institution

Operating digital cash under own licence, 6–18 month cycle → Digital Cash.

Customer profile →

Where the buyer's actual need fits a product different from the one they asked about, the deal routes to that product instead. Mixing products mid-deal is the most common way Aryze loses an opportunity.

Anti-ICP signals

These signals mean none of the three products fits, regardless of customer enthusiasm:

- **Wants Aryze as issuer or regulated operator — Aryze is infrastructure, not operator**
- **Needs AIS features (Account Information Services) — we are PIS-only (Payment Initiation Services) on Pay by Bank**
- **Needs outgoing payments as the primary flow (player withdrawals, refunds as standalone) — we cover customer-to-merchant only**
- **Needs licence delivery — Aryze doesn't provide the licence**
- **Pure research mode with no execution path or budget**
- **Operates outside our geographic coverage (Pay by Bank: UK + EU/EEA)**
