

Pay by Bank — merchant onboarding

The four-step process that takes a merchant from first conversation to live volume — with honest timelines and a clear line around what is not in the box.

Owner: Commercial · Process as of June 2026 · Confidential

THE FLOW IN ONE LINE

Four steps from first conversation to live volume — [map the payment flow](#) → [KYB](#) → [integration & test](#) → [go live](#) — with honest timelines quoted in weeks after step one, not before.

THE PRINCIPLE

Sandbox-first

Before sandbox is informational; after sandbox is contractual.

THE BOUNDARY

PIS-only · customer → merchant

No AIS, no payouts as a standalone flow.

WHERE IT RUNS

UK live · EU/EEA late Q2 2026

19 markets on Mastercard Open Banking; UK via Volt.io.

A go-live timeline is not quoted in a first call. The honest timeline is the sum of four steps measured against the merchant's specific stack, so it is quoted in weeks after step one, not before. No "live in 2 weeks" promises.

The four steps

1 • Map the payment flow — what is actually moving. Volumes per market, average ticket per cohort, where friction shows up today, and which payment methods sit alongside what we add. The integration timeline is a function of this map. Runs during the sales dialogue; the merchant agreement marks the handoff into onboarding proper.

2 + 3 • KYB and integration — in parallel — once the merchant agreement is sent, both tracks start at the same time. **KYB and approvals:** company verification, documentation, approvals; duration depends on jurisdiction, documentation completeness and merchant responsiveness. **Integration and test:** against the sandbox, with the merchant's engineering team.

4 • Go live — KYB approved + integration tested. Monitoring, support, handover.

Live volume, supported — the team that integrates stays for the first weeks of live volume, because that is when the operational questions surface. Go-live is a phase, not a hand-off event.

Optimistic proposals often skip KYB, and skipping it slows deals down. Sandbox-first evaluation: the conversation after sandbox is contractual; the conversation before sandbox is informational.

Where this can run today

MARKET	STATUS	WHAT THAT MEANS
United Kingdom	Live (via the Volt.io partnership)	UK merchants can be onboarded now.
EU / EEA (19 markets, Mastercard Open Banking)	Rollout begins late Q2 2026, pending the Volt-extension contract	EU prospects are pre-sales conversations — not commit-to-go-live timelines — until the contract is signed.

Deliberately not in the box

- **PIS-only.** No AIS, account verification, balance checks or aggregation.

- **Customer → merchant only.** No payouts as a standalone flow.
- **No standalone recurring** under PSD2; recurring only via MPS DK/NO until PSD3 (~2027-28).

The next concrete step

For a qualified merchant — average ticket above the cost threshold, real chargeback/VAMP exposure, engineering capacity for a structured integration — the next step is **sandbox access**. Everything before sandbox is informational; everything after is contractual.
